

Ecoflam

PRODUCT RANGE

www.ecoflam.co.uk

OUR EXPERIENCE

Thanks to almost 50 years of experience in the design and production of burners, Ecoflam offers a full range of blown air pressure jet burners covering an extremely wide range of power, from small products for residential heating applications to high power burners dedicated to the industrial segment. Ecoflam burners are renowned worldwide for providing high efficiency and reliable operation with significant energy savings and feature extreme ease of installation, maintenance and flexible boiler-burner matching.

OUR MISSION

Following a philosophy of continuous improving, the R&D Laboratory is constantly working to produce better results, such as the reduced NOx level emissions.

The development of new advanced combustion technologies allows to propose solutions in respect of the most stringent environmental regulations and to create the perfect condition to face the new upcoming market requests, such as Ultra Low NOx performance and ErP-ready products.

OUR PRODUCT RANGE

The flexibility of Ecoflam solutions allows the manufacturing of highly customized products covering a range from 17 kW to 34 MW:

OUR PROFESSIONAL TEAM

Ability to design state-of-the-art burners, manage demands of products for specific applications, ability to solve problems in real time are just some of the characteristics of our technicians and engineers. But not only: Ecoflam has a worldwide network of service technicians able to support the installation, the commissioning and the periodic maintenance activities of the burner.

OUR INTERNATIONAL APPROACH

Our products are designed, developed and manufactured in Italy, combining quality, reliability and high performance. All these features are necessary for the end-user satisfaction, which is the first target for Ecoflam. Reaching this outcome throughout its extensive worldwide network of distributors and customers has always been a challenging task for Ecoflam, which was achieved only by developing a close and personalized relationship with each customer, always taking into account the needs and the distinctive characteristics of each individual market.

MAX GAS

MONOBLOCK GAS BURNERS FROM 17 TO 700 kW

RANGE OVERVIEW

All models available in Low NOx Class 3 versions ($\text{NO}_x \leq 80 \text{ mg/kWh NCV}$)

Models up to MAX GAS 500 available in ErP complaint versions ($\text{NO}_x \leq 56 \text{ mg/kWh GCV}$)

MAIN FEATURES

- Two stage PAB models available with different burner controllers, with or without digital informative display
- High efficiency fan ventilation system (HPV) allowing easy burner-boiler matching even with high combustion chamber pressure
- Combustion head easy to assemble and adjust
- The hinge flange allows easy access to the combustion head without losing the original settings (starting from MAX GAS 350)
- All models are available to work with 50 and 60 Hz electrical frequency
- All models up to MAX GAS 500 are in compliance with ErP Directive

High efficiency fan ventilation system (HPV)

MAX GAS 40 P

MAX GAS 105 P

MAX GAS 170 P

MAX GAS 170 PAB

CONFIGURATIONS

MAX GAS range is available in the following operation modes:

MAX GAS ... P	MAX GAS ... PAB	MAX GAS ... PR
One stage Low NOx Class 3 ErP ready	Two stages Low NOx Class 3 ErP ready	Two stage progressive/modulating mechanical Low NOx, ErP ready
All models	MAX GAS 120 ... 700	MAX GAS 350 ... 700

Other available configurations:

- Progressive versions are available starting from MAX GAS 350 and can be transformed into modulating with an optional kit
- LPG versions
- Continuous ventilation versions
- High temperature versions
- OEM and other special versions on request according to feasibility

FUEL

- Natural gas (G20, G25 according to EN676)
- LPG

EMISSIONS

Class	NOx mg/kWh
1	170
2	120
3	80

All models are in compliance with EN 676 European Standard

All models up to MAX GAS 500 are in compliance with **ErP Directive** (NOx ≤ 56 mg/kWh, based on GCV)

CONFORM TO

All products are in accordance with the following directives:

- 2006/42/EC Machinery Directive
- 2014/30/UE EMC Directive
- 2014/35/UE Low Voltage Directive
- 2009/142/CEE Gas Appliances Directive

RANGE OVERVIEW

Low NOx Class 2 ($\text{NO}_x \leq 120 \text{ mg/kWh}$) and Low NOx Class 3 ($\text{NO}_x \leq 80 \text{ mg/kWh}$)

MAIN FEATURES

- Modulating version with PID controller with digital set point display and real time value
- Version with fully electronic Burner Management System available for all models
- Adjustable combustion head for easy regulation and matching with different combustion chambers
- High turndown ratio up to 1:8
- All models are available in Low NOx class 2 or Low NOx class 3 versions
- Versions with FGR System (Flue Gas Recirculation) are available and allow to reach NOx emissions below 30 mg/kWh
- Configured and special versions on request according to feasibility

CONFIGURATIONS

BLU range is available in the following operation modes:

BLU ... PAB
Two stages
BLU 700.1 ... 2000.1

BLU ... PR
Two stage progressive/modulating mechanical
All models

BLU ... PRE
Two stage progressive/modulating electronic
All models

Other available configurations:

- LPG versions up to BLU 6000.1
- Continuous ventilation versions
- Swirl system for flame geometry customization
- Version with FGR System to reach Ultra Low NOx emissions ($\text{NOx} \leq 30 \text{ mg/kWh}$)
- OEM and other special versions on request according to feasibility

FUEL

- Natural gas (G20, G25 according to EN676)
- LPG

EMISSIONS

Class	NOx mg/kWh
1	170
2	120
3	80

All models are in compliance with EN 676 European Standard

CONFORM TO

All products are in accordance with the following directives:

- 2006/42/EC Machinery Directive
- 2014/30/UE EMC Directive
- 2014/35/UE Low Voltage Directive
- 2009/142/CEE Gas Appliances Directive

BLU 6000.1 PR

BLU 17000.1 PRE FGR

RANGE OVERVIEW

MAIN FEATURES

- High efficiency fan ventilation system (HPV) allowing easy matching with boilers having high combustion chamber back pressure
- Electrical wiring simple to disassemble for easy maintenance
- Combustion head easy to assemble and adjust
- The hinge flange allows easy access to burner head without losing burner settings (MAX 35 and MAX 45)
- Models from MAX 1 to MAX 12 work with 50-60 Hz electrical frequency
- ECOFLAM is upgrading all the models up to 400 kW to respond to the requirements of the ErP Directive

CONFIGURATIONS

MAX range is available in the following operation modes:

MAX
One stage
All models

MAX P ... AB
Two stages
MAX P 35 AB - P 45 AB

MAX P ... AB HS
Two stages with hydraulic jack
MAX P 12 AB HS ... P 45 AB HS

Other available configurations:

- Continuous ventilation versions
- High temperature versions
- Versions with specific pump for light oil with maximum viscosity 5°E at 20°C
- OEM and other special versions on request according to feasibility

FUEL

- Light oil (viscosity from 1,6 cSt to 6 cSt at 20°C)

EMISSIONS

Class	NOx mg/kWh
1	250
2	185
3	120

All models are in compliance with EN 267 European Standard

CONFORM TO

All products are in accordance with the following directives:

- 2006/42/EC Machinery Directive
- 2014/30/UE EMC Directive
- 2014/35/UE Low Voltage Directive

RANGE OVERVIEW

MAIN FEATURES

- Two stage version with hydraulic jack or electric servomotor up to MAIOR P 400.1
- Progressive mechanical version with flow return nozzle
- Modulating version with PID system controller with digital set point display and real time value
- Version with fully electronic Burner Management System available for all models
- Version with sliding bars standard for models from MAIOR 700.1 to MAIOR 1200.1
- Adjustable combustion head for easy regulation and matching with different combustion chambers

CONFIGURATIONS

MAIOR range is available in the following operation modes:

MAIOR P ... AB	MAIOR P ... AB HS	MAIOR P ... PR	MAIOR P ... PRE
Two stages	Two stages with hydraulic jack	Two stages progressive/modulating mechanical	Two stages progressive/modulating electronic
MAIOR P 60 AB ... P 400.1 AB	MAIOR P 60 ... P 400.1 AB HS	MAIOR P 45 ... P 1800.1 PR	MAIOR P 45 ... P 1800.1 PRE

Other available configurations:

- Continuous ventilation versions
- Versions with specific pump for light oil with maximum viscosity 5°E at 20°C
- OEM and other special versions on request according to feasibility

FUEL

- Light oil (viscosity from 1,6 cSt to 6 cSt at 20°C)

EMISSIONS

Class	NOx mg/kWh
1	250
2	185
3	120

RESIDENTIAL RANGE

BURNERS FOR OEM BOILER SPACE HEATERS AND BOILER COMBINATION HEATERS

Ecoflam is always committed to support the oil boiler manufacturers needs and to protect the environment through the continuous improvement of processes and products with the target to offer efficient, reliable and technologically advanced solutions to the market. Based on this commitment, a new generation of low NOx and Blue Flame oil burners are available to meet the requirements for nitrogen oxides under the ErP Ecodesign Regulations and the most stringent European legislation requirements already in force in specific countries and expected to be even more demanding for the future. In addition to the single stage historical systems the Ecoflam burner range includes innovative two-stage and fully modulating versions, offering an important advantage in terms of efficiency.

MAX LN and MAX BLUE Series

- One stage light oil burners available from 15 to 100 kW
- Two stage models now ready up to 100 kW and fully modulating models up to 62 kW
- Low NOx (LN) patented yellow-blue flame combustion solutions ready to meet the ErP Ecodesign requirements with NOx well below 120 mg/kWh
- Blue Flame versions ready to comply also with the most restrictive emission limits expected in the future
- Powerful systems granting very high ventilation performance
- Easy installation, adjustment and maintenance

MAX 4 LN

F10/F15 E2-5 – Low NOx modulating burners

- Innovative fully modulating light oil burners from 8 to 62 kW
- Blue Flame combustion technology granting NOx emissions below 90 mg/kWh
- Patented modulating system
- High ventilation performance
- Low noise and low electrical consumption
- Easy setting through a 3-point curve

F10E2-5.60

Special customized models

- Two stage light oil burners covering an output range from 11 to 42 kW
- Blue Flame combustion technology with NOx emissions below 110 mg/kWh
- Suitable to operate in altitude with high performances

UB1.42 VD

Burner models suitable for light oil, kerosene, low sulphur oil and bio blends available depending on the configuration.

SPECIAL VERSIONS

MONOBLOCK AND DUOBLOCK BURNERS UP TO 34 MW

Ecoflam is renowned for its ability to conceive and build flexible products and to propose customized solutions for any type of applications.

Successful and satisfied customers, both from OEM or distribution fields, demonstrate throughout the years that Ecoflam is able to meet their requests offering a wide range of special products capable to satisfy even the most difficult ones.

High Temperature versions

Small products for industrial applications

Two-gas burners

Two/four head burners

FGR (Flue Gas Recirculation)

Remote control panel

FGR SYSTEM

ULTRA LOW NO_x BURNERS (NO_x ≤ 30 mg/kWh)

FGR: PRINCIPLE OF OPERATION

Ecoflam developed a performant range of products which uses the external **FGR technology** (Flue Gas Recirculation) to reduce NO_x emissions and satisfies even the most stringent regulations.

The principle of external flue gas recirculation consists in sending a mixture of comburent air and flue gas to the combustion head, thus reducing the NO_x emissions. This process allows the possibility to reach NO_x emissions **below 30 mg/kWh**, a value which is hard to reach with conventional combustion systems.

FGR ON MONOBLOCK BURNERS

The FGR system on monoblock burners provides that the flue gas is drawn in by the burner fan.

The installer must therefore install a line connecting the flue gas outlet to the burner fan inlet. The extraction point is generally at the base of the flue pipe, where the pressure is close to zero. A suction is generated in the burner intake box which is a function of the fan curve and the air damper position.

In order to ensure an adequate rate of flue gas from the stack and thus to provide the required NO_x reduction, the pipeline between the flue and the burner must be sized to minimise the pressure drop.

ULTRA LOW NO_x BURNERS (NO_x ≤ 30 mg/kWh)

ULTRA
Low
NO_x 30
mg/kWh

FGR ON DUOBLOCK BURNERS

LAYOUT 1

The FGR system for **duoblock burners**, in which the draughtfan is installed in a remote position, has a different layout, since the flue gas line must enter the circuit upstream of the fan itself. Furthermore, to generate the required suction to convey the flue gas into the fan and mix it with the combustent air, the flow regulation device must be located upstream of the flue gas inlet into the fan suction circuit. As for monoblock units, also here the flue gas line must be properly sized.

LAYOUT 2

In case of installations with duoblock burners there is an alternative option to layout 1. In this scenario there is a further draught fan dedicated to the flue: it takes the flue from the stack and pushes it into the duct between the burner and the fresh air draught fan. The flue damper is just after the flue fan. The air damper is on burner board and therefore it adjusts the rate of the mixture between the flue and the fresh air. Also in this case the flue duct has to be properly sized in order to minimize the pressure drop.

CUSTOMER CARE

COMMISSIONING

For safe and efficient operation of the burner system it is very important that the burner is commissioned by an expert.

The combustion will be optimally adjusted over the whole power range of the burner, and all the safeties will be tested. Ecoflam service technicians are able, like no other, in performing this job adequate and competent, to run the installation worry-free.

MAINTENANCE AND INSPECTION

The burner is a crucial part of the installation. To keep the installation in good conditions, it is important to maintain the burner periodically. It is also very important to inspect all the safeties to ensure that the system operates safely. The professional services of Ecoflam can perfectly perform this service for any type of installation.

THE BURNER ACADEMY

In order to respond to the needs of the customers Ecoflam created the Burner Academy, a real school where the know-how of the internal technicians is diffused to partners and customers.

It's an opportunity for boiler room personnel, operators and engineers to attend a series of training sessions carried out on test bench by highly qualified instructors, who held the courses in English, German, French, Italian and Dutch language.

The Burner Academy uses various training locations where boilers are installed and where people can be trained in theory and in practice. Courses are available in different levels and there is also the possibility to handle customer-specific training.

WORLDWIDE SERVICE NETWORK

Ecoflam uses a worldwide network of partners, consisting of well-trained local engineers, to carry out its service operations. These technicians are able to perform both commissioning and local service and they do it in a very professional way.

RELIABLE SUPPLY OF SPARE PARTS

Spare parts have always had a great importance inside the Ecoflam world. Considering the high amount of parts involved in every single product, some of these parts might naturally need to be substituted. Ecoflam can count on a international network offering original spare parts in order to guarantee the highest quality, reliability and safe continued operation of the appliance.

WORLDWIDE NETWORK

Manufacturing is carried out in the factory of Resana (Treviso - Italy) and products are distributed worldwide thanks to a wide and highly qualified network of partners.

In 45 years spent on the field, Ecoflam has been capable to build loyal partnerships and today can count on reliable partners in more than 100 Countries. They distribute Ecoflam products in their Countries of competence, they have good knowledge of the products, and can carry out commissioning and service by keeping constantly in touch with the headquarter.

Thanks to this international network Ecoflam is also able to offer original spare parts in order to guarantee reliability and safe continued operation of the end user installation.
